SPECIFICATIONS

Floating Balance RollerLift or Ratchet Height Adjust

Pneumatic Lift mono-column is the perfect adjustment solution for round and square tops on an X base. It provides unbelievably smooth adjustment up and down with a release lever that is mounted to the underside edge of the top. A large adjustment range with infinite stop positions.

Key Features

- Pneumatic cylinder lift with infinite stop positions
- No-bounce cylinder stop for a solid table top
- Steel roller guidance system
- Cable release with handle specially designed to resist unintended activation
- Easy control of speed with release mechanism
- Pneumatic force of 44 pounds (200Newtons)
- Roller Height Range: 19.7" from 26" to 45.7"

Ratchet Height Adjust

It looks the same, and costs less than the Floating Balance, but there is no physical assist. You do all of the lifting. You (and a friend) step on the base and lift the top to the desired position. To lower the setting, the top must be lifted beyond its highest setting, which resets the ratchet so the top can be lowered (freefall) to its bottom position. Upon lifting, the ratchet will click and hold when you stop lifting.

Key Features

- Base height variable: 26" to 35.45"
- Range 9.45"
- Stepped increments of 0.78"

Base Specification

- X Base

Top Sizes

- Circle Diameters 28" 30" 36" 42"
- Squares 30" 36" 42"
- TriCloud 44"
- BrainStorm (lobes) 44"

Top Materials

- Thermofoil with contoured edges
- Laminate top with PVC edge trim
