

# Quint™

build a mosaic of  
collaborative arrangements

SMARTdesks®

# Quint™

...essential for collaboration environments

SMARTdesks designers looked to the ancient art of mosaic as inspiration for Quint collaboration conference tables. Just as mosaics can be constructed with tight or loose relationships, their proximity creates the unity or desired negative space. Quint's five-sided top is a minimum footprint size for a personal space. The smooth-running lockable casters allow easy repositioning. Groups of any size may be assembled, creating shapes that directly relate to communication with unlimited possibilities.

Quint tops may be supported by fixed height legs, giving a working height of 28 inches. The width of the top is 24 inches. When arranged tightly, the actual space around the work area is greater giving users more elbow room in a smaller space. Arranged loosely, the shape of the grouping is organic, dependent only on the users of the group to arrange themselves conversationally. Quint establishes a personal space that can be controlled by the users, themselves, to reach a comfort zone for the group.

When an iPad flipIT® is installed, a hat channel makes a six inch clearance for the iPad® attached to the rotating panel. For security and convenience, the iPad may be locked in the closed position. The iPad flipIT enclosure allows iPad to remain connected to power, supporting the iPad in landscape and portrait positions, as well as the FaceTime camera.

Quint is also available with adjustable height bases. The ratchet type height adjustment has an excursion of twelve inches, making the working height 30 to 39.45 inches on a hat channel, or 24 to 33.45 inches without the hat channel. Lift all the way to return to the lowest setting; raising in 0.78" increments.

The ratchet base is German precision engineering.

The spring-pin height adjustable model has a range of 22" to 28" in 1" increments. With iPad flipIT and hat channel, add 6" for a range of 28" to 34".

# Quint™

... is essential for flexibility

Just big enough for one user. Available with fixed height or adjustable height legs, suitable for any age. The five-sided tops fit together in groups of four and eight, and string together for geometries that make learning and working together fun.
