

DaisyLink Quick Disconnect Insert

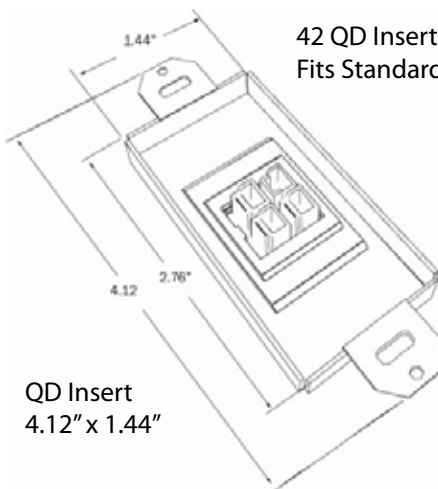

Plug & play power from anywhere in the room!

Don't let power access restrict your room layout. The new DaisyLink Quick Disconnect Insert converts traditional electrical housings that accept a standard Decora® plate, such as raised and flush floor boxes or standard wall outlets, to simple Plug and Play power access connections. Whether new construction or retrofitting an existing room, the insert allows easy and clean integration of the system.

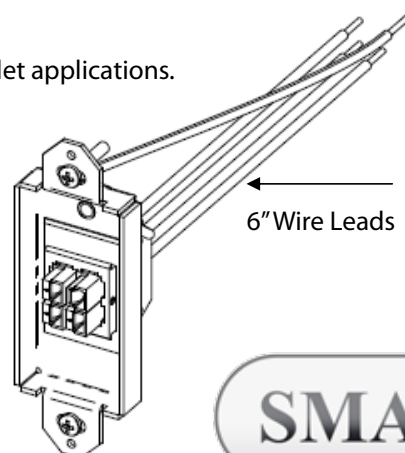

This addition to the DaisyLink system makes it the only 4 wire, multi-circuit system that offers both a traditional hardwire power infeed as well as a simple Plug and Play connection in a floor box. When combined with the system's "No Particular Order" feature, which allows you to move your tables without being restricted by color codes, clean aesthetics of the system when installed and that it is completely UL Listed under UL 183 and you have the most complete daisy chain system available on the market.

Quick Disconnect Insert Configuration

42 QD Insert for floor box and wall outlet applications.
Fits Standard Decora® opening.
