Isle™ Specification Sheet and Ordering Information

Isle Collaborative Power System

The Isle is a unique power solution that is aligned with one of the fundamental principles of collaborative workspaces, flexibility. The Isle can be easily moved and positioned among a cluster of chairs or tables to provide power for a group of users. Should the configuration change, simply move the Isle and reposition in a new space.

The Isle Offers the Following:

Unleash the Power of Design

Bringing power to a workspace is a challenge in collaborative space designs. The Isle takes the power outside the furniture and becomes a standalone power station easily adaptable to a variety of workplace designs.

Power All Around

Tri-core design allows for 360 degree power access for everyone, whether it be an impromptu meeting or active study session. A single 15 amp plug provides access to 9 power receptacles for powering laptops and 6 active USB ports to power iPads or mobile phones.

Built to Last

The Isle is constructed of metal, providing stability and durability, important in high traffic collaborative workspaces. Additionally, slots in the base allow unit to be tethered to a floor or pole if a stationary application is desired.

Safety in Design

The Isle is ETL listed and uses tamper proof receptacles, offering an additional level of safety in collaborative environments.

Isle Configurations

Isle	
9 power connections and 6 active USB ports, 108" cord.	
Part Number	Finish
ISLE-GW	Glossy White
