

# MiniMac Brig™

A High Security CPU Holder Designed for the Mac mini®

MiniMac Brig™ is designed to work with MacTable™, HorizonLine™ and Pi™ Computers Tables, integrated with the steel leg mounting brackets. The U-channel mounts go around the 2" diameter legs, but they may also be installed with wood screws into the MDF for tables and desks that do not use our leg design.

The MiniMac Brig slides into the U channel mounting bracket, which is bolted to the leg system or mounted directly to the underside of the desktop. A beta pin keeps the Brig mount interlocked. A large hole is provided through the locking tab so your own padlock may be used. If a simple deterrent is preferred, a cable tie does the trick.

The kit includes two sets of carbon steel bars used for single or double mounting. Full access to drives and connections. Installation using one-way screws adds further security. All steel construction, white powdercoating.

Full access to drive slot in the front and data connections in the back. Your Mac mini® will stay in lock up, safely captured.

Where people use technology.™
