

HorizonLine™

Monitor Lift Computer Tables

Freedom for widescreen monitors.

HorizonLine™

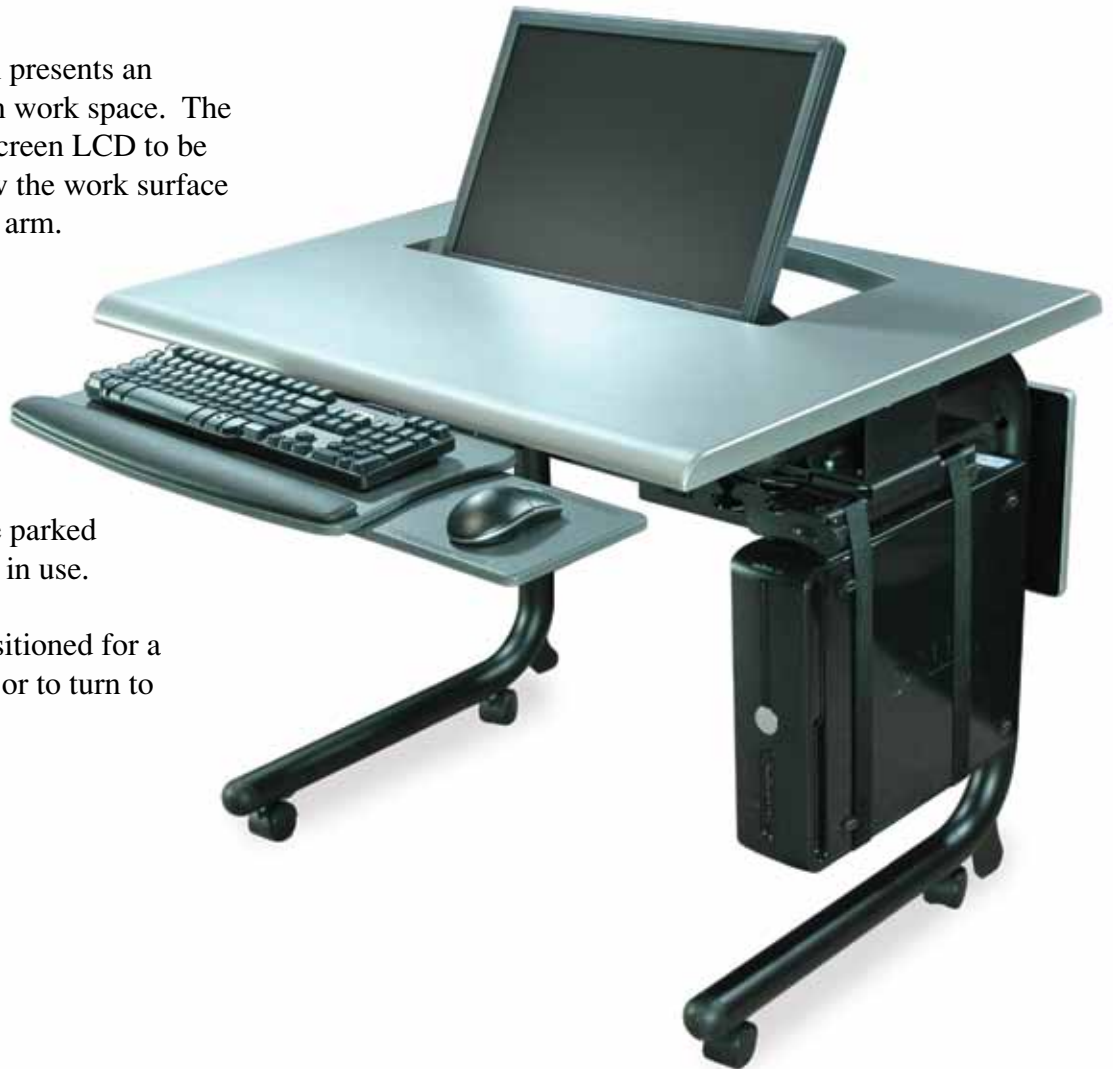

Monitor Lift Computer Tables

This simple, elegant design presents an efficient, flexible classroom work space. The monitor port lets the widescreen LCD to be positioned above and below the work surface on an under-mounted LCD arm.

The LCD arm gives a full range of motion: 360° swivel, 90° tilt, and forward to rear excursion within the port hole.

The screen may actually be parked under the surface when not in use.

The screen may also be positioned for a standing presenter to view, or to turn to show the class.

Available in singles and doubles, Horizon-Line™ Monitor Lift Tables keep cable clutter organized behind an attractive modesty panel.

The CPU is suspended from the robust leg bracket, engineered for long performance life. The EZ-Cinch™ CPU holder provides complete IT access with a clean, designer profile.

The LCD Arm lets you adjust the tension to balance the weight of your monitor. Wire management is provided for a neat appearance.

Choose locking casters for mobility, or floor glides for more stationary use.
