Makes any desktop a secure, multi-use workstation!

Double the productivity of your work space!

flipIT®

When you rebuild your desktop with flipIT, you gain power over your work area. Access to the computer is as easy as sliding the keyboard tray toward you. This rotates the LCD flat screen display into a semi-recessed position—ergonomically ideal for classroom, institutional, business and home applications—providing clear sight lines for unobstructed interaction.

When a clear desktop is needed for books or writing, simply slide the keyboard tray in, and the LCD rotates to a secure and stowed position. When closed, flipIT provides total data and equipment security—meeting most business, HIPAA and Homeland Security requirements (optional lock kits are available). In classroom use, teachers report that using flipIT really keeps students on task because they can't use the computer when they are not supposed to.

The flipIT System installs in any 30" deep worksurface using basic tools. The system is equipped with VESA universal mounting brackets to accommodate most monitors. **FIK-18 flipIT Kit** accommodates standard LCD monitors with case width up to 17.5 inches (15" to 18" and some 19" models). **FIK-22 flipIT Kit** accommodates 19" to 21" and wide aspect ratio LCD monitors up to 22" case width.
