

**flipIT**®  
 GENERATION II

Transforming desktops to do more in the same space.  
 New flipIT® is more ergonomic. More automatic. More secure.

Generation II flipIT now gives you an even easier way to transform your computer classroom into a general purpose space when other teaching methods are required. As a computer lab, your LCD displays are presented at the perfect semi-recessed position—below the horizon line—so every student has an unobstructed view of the classroom and the instructor. And the instructor has an unobstructed line of sight, ideal for presenting course content with complete control.

*Locked and secure, the FI Series computer desk transforms into a standard desktop in seconds!*

*Transforming the future of education  
 one classroom at a time<sup>sm</sup>*

# flipIT<sup>®</sup>

GENERATION II

Here's how it works...

Installs easily  
into desktops  
of any shape!

*The LCD angle easily adjusts to the perfect angle for ergonomics and to avoid glare.*

Locked and secure, the computer is completely out of the way for general classroom use. (Keyless locking systems are available).

To open flipIT<sup>®</sup>, unlock the top and pull the keyboard tray toward you. When the keyboard tray is pulled out this far...

...the LCD rotates into position, smoothly, safely, and under pneumatic power. With articulating keyboard option, the flipIT is actuated by a lever.

In seconds, flipIT<sup>®</sup> presents the computer ready for use.

To close, pull the flipIT<sup>®</sup> LCD support toward you. The keyboard tray tucks itself in. When the top rotates to this point, flipIT<sup>®</sup> gently closes.

Transformation complete.

Note: The flipIT mechanism is available without keyboard—actuated by lever.
