

You'll flip over this display!

The automatic features of the flipIT™ LCD display extend the ergonomic benefits of the flipIT™ multi-use desk system. When the display is deployed for use, it powers-up automatically. It powers down when put away. But that's only the beginning.

A sensor detects the ambient light and automatically adjusts the display brightness in a range from 10 nits to "sunlight readable" 230 nits.

The 15" or 17" flipIT™ LCD displays are completely "plug

and play." And you can choose touch screen functionality in your choice of resistive, capacitive or acoustic wave technology. Vandal shield and emi are also options.

flipIT™ displays are easy on the eyes with anti-reflective/glare performance. Case colors are available in black or putty. The standard warranty includes one year, all parts and labor, and the LCD is guaranteed a "perfect bright" 100 nits for two years without degradation of brightness.

Now your multi-use flipIT™ classroom can run even more efficiently with displays that integrate with the flipIT™ concept:

- automatically on
- automatically off
- automatically the right brightness
- automatically secure

flipIT™
