Flexibility • Security • Privacy

Specifications

Product Description

The Trolley is available in two versions, the mechanical and electro-mechanical. The device raises and lowers various sizes and brands of LCD monitors above and beneath any surface. This provides for flexible computer integration for any work or training environment. The Trolley also enhances security, privacy, and aesthetics.

Functionality

Mechanical and electro-mechanical lifting and secure storage of LCD monitors. Design allows for multiple viewing angles. Multiple security levels include keyed, ID card and biometric fingerprint ID control. Electro-mechanical version can be networked to central security system.

Flexibility

System designed to accept a variety of brand name LCD monitors for 15", 17", and 19" sizes. Can be utilized in a variety of positions and locations (ascending from work surfaces, descending from overhead storage, or horizontally out of walls). Electro-mechanical version can control multiple units with a single remote.

Quality/Durability

Built of steel, die cast aluminum, high strength nylon and ABS/PC.

Environmental Sustainability

Made with 100 percent recyclable materials.

Aesthetics/Style

Unique, multi-functional monitor arm system has slim and compact form to occupy minimal surface area. Enhances wire management. Neatly hides equipment when not in use. Color and texture complements computer hardware while enhancing any furniture design.

Innovation

Slim and compact form occupies minimal surface area. Innovations include constant force spring motion with adjustable braking system and inward/outward locking. Electro-mechanical version, in combination with constant force springs, allows for multiple control and security options.

Pricing

\$695.00 to \$950.00 list
