

SS SERIES WORKSTATIONS

SUB-SURFACE MONITOR CONFIGURATION

You can integrate computers into the learning environment without sacrificing traditional classroom utility.

Sub-Surface Monitor Workstations provide the option of computer-based training (CBT) instruction while maintaining a clear work surface for traditional classroom functions and an open line of sight between student and instructor.

SSS-363030-TK9

By mounting the monitor on a shelf under the desk top behind a glass window, the CPU in its own bay beneath the work surface and providing a pull-out platform for the keyboard and mouse, access to a computer is maintained and a full work area is still available for other activities.

The multi-purpose sub-surface desk offers a number of distinct advantages over other configurations for certain specific applications and circumstances. Mainly, this workstation allows students the opportunity to do research and writing without having to move to a computer lab.

In addition to a clear work area, the fully encased computer is less susceptible to damage, theft or abuse. All cables are concealed and conveniently routed through horizontal and vertical channels within the desk.

Finally, the sub-surface configuration provides an ideal testing environment. With the CRT screen set at the correct depth and angle, total privacy is possible without walls and only a few feet of separation.

Our product numbers have meaning:

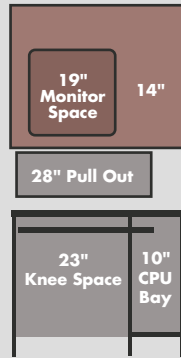

SSS-603630-CK9

Prefix:	Dimensions:	Suffix:
Single	Width= 60"	C= Double CPU Capacity
Double or	Depth= 36"	T= Tower CPU Only
Triple	Height= 30"	K= Keyboard Pull Out
Sub		9= 19" Monitor
Surface		1= 21" Monitor
