# iPad flipIT Kit®
for classroom security

iPad flipIT® makes iPad classrooms safer places. No fear of dropping the iPad, knocking it off of a simple stand, or fiddling around with a folding case. The steel enclosure gives access to all controls and allows the USB power cord to pass through for uninterrupted power. iPad® may be positioned in land-scape or vertical positions with openings for the home button and FaceTime camera. Teachers may elect to install the no-home button block out so only one app may be used in class. Locks with the press of the button, unlocks with a universal key. Enclosure is fastened with security hex key not available in hardware stores.

iPad flipIT Kits® have black lids and metal parts. When specifying iPad flipIT® for installation, all-black is the finish standard.

iPad flipIT Kit® installs in any table top using basic carpentry skills. Power tools are required to make the cutout in the table top. iPad flipIT® may also be specified to be factory installed in most SMARTdesks classroom furniture. Order the iPad flipIT® online—only at www.smartdesks.com.
